Tsunami Technologies wins contract to provide high performance computing services to NAVAIR.

Orlando, Florida, July 16 2009

Tsunami Technologies Inc. has been awarded a government contract to provide high performance computing services to Naval Air Warfare Center Weapons Division Geophysics Branch at China Lake. Under the contract, NAVAIR will remotely access a high performance Linux cluster, which is hosted by Tsunami Technologies, over the Internet. The cluster will be used to run atmospheric modeling applications including the Coupled Ocean/Atmosphere Mesoscale Prediction System (COAMPS®), COAMPS On-scene (COAMP-OS®), and the Weather Research and Forecasting model (WRF).

Tsunami Technologies will provide the Linux cluster, system management, and technical support for the 1 year contract.

About Tsunami Technologies Inc.

Tsunami Technologies, founded in 2000, is an Orlando-based small business that provides on-demand high performance computing services via the Internet for government, commercial industry and academic institutions. The company's business model allows pay as you go access to high performance computing systems which can be used to meet peak requirements or as a complete computing solution. **Tsunami Technologies** can be a strategic partner for companies who want to avoid the upfront and ongoing costs of purchasing and maintaining a high performance computing system.
