Press release
November 1, 2009

Tsunami Technologies Inc., a leading provider of on-demand high performance computing services, announced today that it is changing its corporate name to Sabalcore Computing Inc. The shareholders of the Company's stock authorized the corporate name change and has filed and received approval for the name change with the state of Florida.

"We chose to rename our company to more accurately reflect the Company's current mission and vision for future growth and to clearly communicate our commitment to our customers," stated John D. Van Workum, President of Sabalcore Computing Inc. "The name 'Sabalcore' is derived from the CPU 'core' found in modern processors and the 'Sabal' Palm tree which is indigenous to Florida and is remarkably steadfast, resistant to fire, floods, cold, high winds and drought. By aligning our corporate name with our core business offering, we are communicating to the investment community and customers the Company's ongoing focus of quality service and performance."

Sabalcore provides online access to high performance computing systems along with engineering support for a variety of sectors. It also provides a simple and customizable user environment designed to be easy to use for the inexperienced HPC user, yet has all the tools familiar to the power-user. Sabalcore is where data becomes discovery.

Starting today, the company has launched a new website, www.sabalcore.com. All business activity moving forward will be conducted using the new name.

About Tsunami Technologies Inc.

Tsunami Technologies, founded in 2000, is an Orlando-based small business that provides on-demand high performance computing services via the Internet for government, commercial industry and academic institutions. The company's business model allows pay as you go access to high performance computing systems which can be used to meet peak requirements or as a complete computing solution. Tsunami Technologies can be a strategic partner for companies who want to avoid the upfront and ongoing costs of purchasing and maintaining a high performance computing system.
